

Because I CAN LIFE Presets for Adobe Lightroom CC on Mobile and Desktop Devices

These presets will create magic with any raw image!
Follow these simple instructions to start using your presets right away!
Let's get started. We have a few options to getting your presets.

Mobile Device:

How to install your presets without a desktop – only using your mobile device:

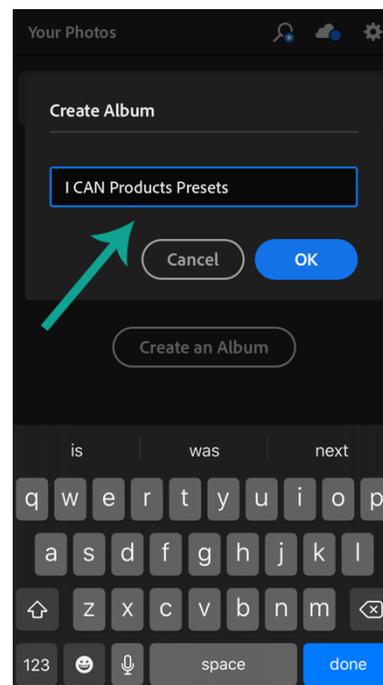

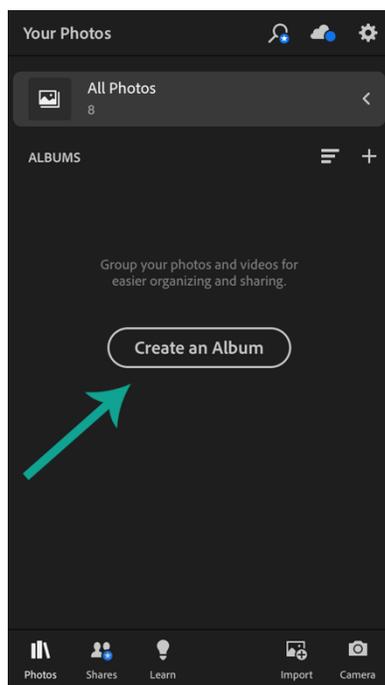

Step 1: Download Adobe Lightroom CC and Google Drive App. It's a FREE app and is available for iOS and Android devices.

Step 2:

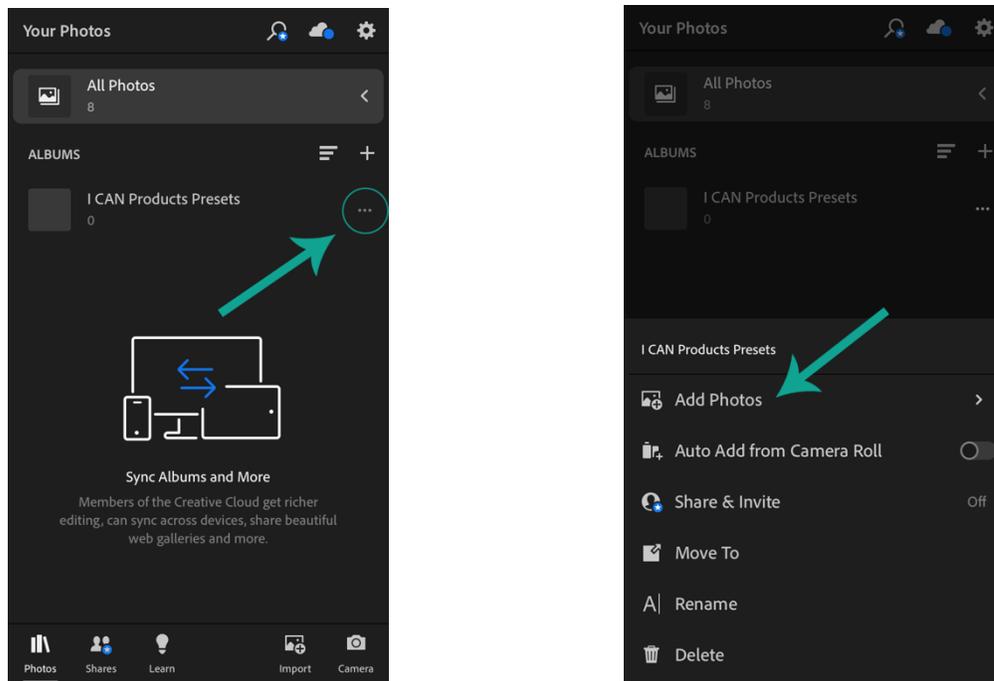

Go to becauseicanlife.com/preset. On your phone go to the google drive app. (Be sure to sign in) Search "Mobile." Click on one of the 4 pictures (dng. File) and hold finger over the picture and save to the camera roll.

Now open Lightroom app.

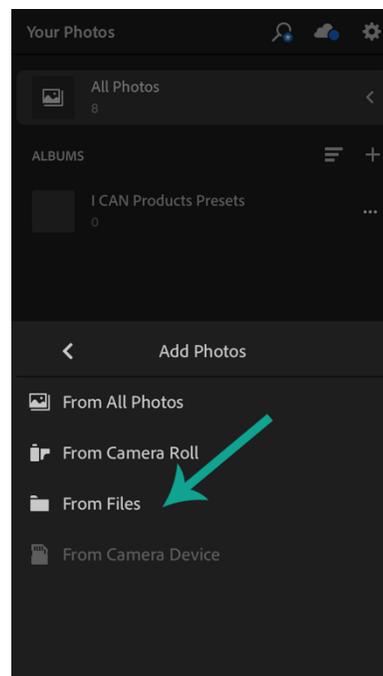

Open the Adobe Lightroom App and create a new album. Name it "I CAN Presets", Click OK.

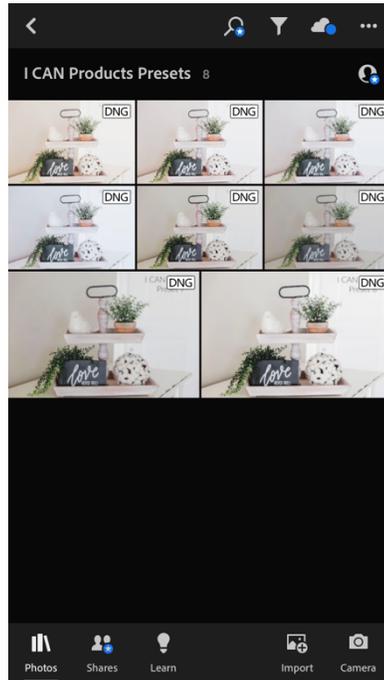

Next, you need to add the DNG files that you have downloaded. Click the three little dots next to the presets name you just created (i.e. "I Can Presets"). Tap Add Photos.

Click From **Camera Roll** or Files(depending how you saved them) . You should see your downloaded files. Click on each file to import your .dng files. They will be named with "ICAN..."

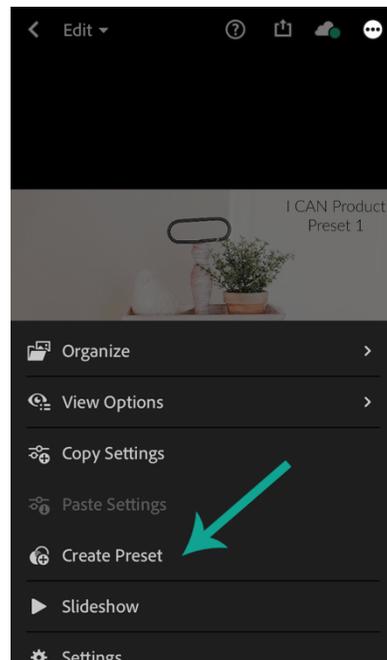

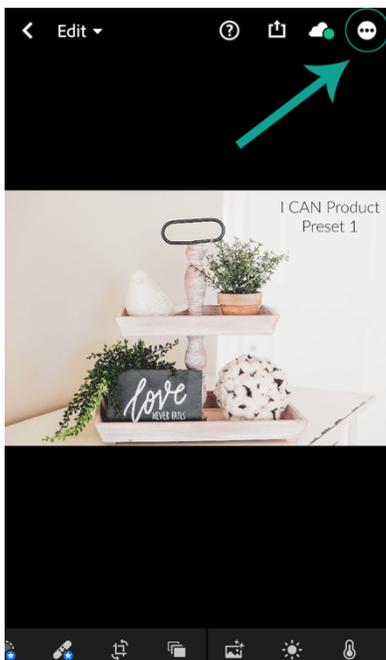

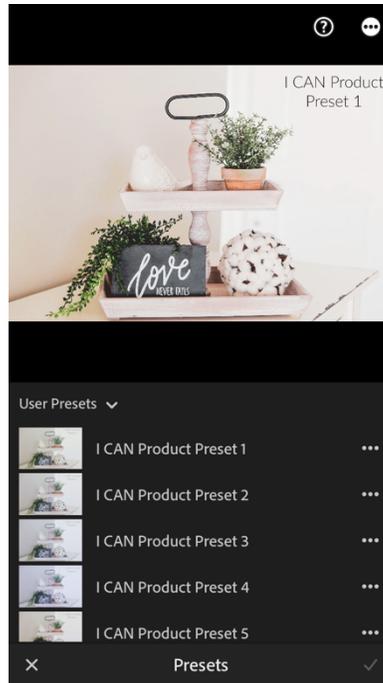

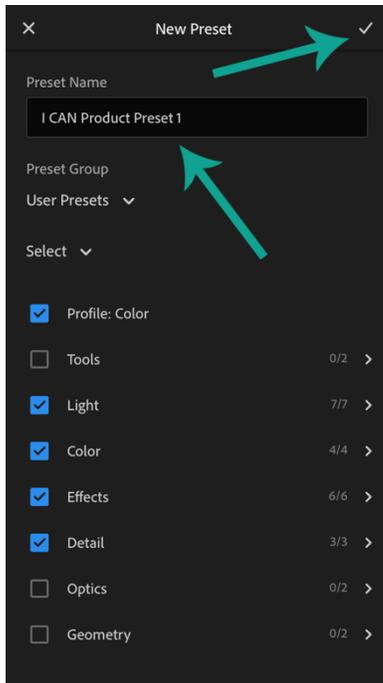

Click on the black pictures that say DNG file.
Now the presets are imported into a newly created album in Lightroom.

Step 4: Last step - we are almost there.

Open the first DNG file and tap on the 3 dots of the top right of the screen and then tap on Create Preset. A field will pop up to name and save the preset. Name them (preferably the name on the picture – to keep it simple) and click on the checkmark in the top right to save. Go through each DNG file and do the same thing so you save every preset.

Wahoo....

Now all you have to do is import your raw pictures into Lightroom from your Camera Roll. Click Import to bring over your raw pictures. Then click From Camera Roll (or wherever you have your pictures saved). Select your photo(s), click Add. Then tap you picture again once added. At the bottom menu, tap Presets, then you can click on all the different presets to find the one that works best for your pictures.
